

Arctic Wolf® Security Operations Bundles

The Cybersecurity Landscape

Today, organizations are exposed to more cyber risk than ever. In fact, more than seven out of 10 organizations believe that their sensitive data was compromised or breached in the past 12 months.*

To solve this challenge, organizations have heavily invested their time, energy, and budget into multiple security tools and point solutions. However, this strategy has yielded negative returns due to alert fatigue, skills shortage, and ineffective security responses.

What Customers Need to End Their Cyber Risk:

End-to-End Risk Reduction

- Proactive security to reduce the likelihood of an incident combined with reactive security that detects, responds, and limits the severity of an attack

Security Expertise

- On-call security experts to configure systems, answer questions, and provide guidance
- A cybersecurity platform that leverages existing technology investments

Risk Transfer Options

- Best-in-class financial coverage included with security purchase investments
- Cybersecurity solutions that match insurance controls to ensure approvals and lower premiums

Security Hardening

- Assess your security posture against industry and insurance frameworks to identify gaps and prioritize risk mitigation activities

Security Operations Bundles

Arctic Wolf's Security Operations Bundles provide a full suite of technology, security expertise, and risk transfer options to help end your cyber risk.

Whether it's proactive security offerings like employee awareness training, vulnerability scanning, or incident readiness planning; or reactive detection and response capabilities to minimize the severity of an incident, the Security Operations Bundles provide broad coverage across your attack surfaces.

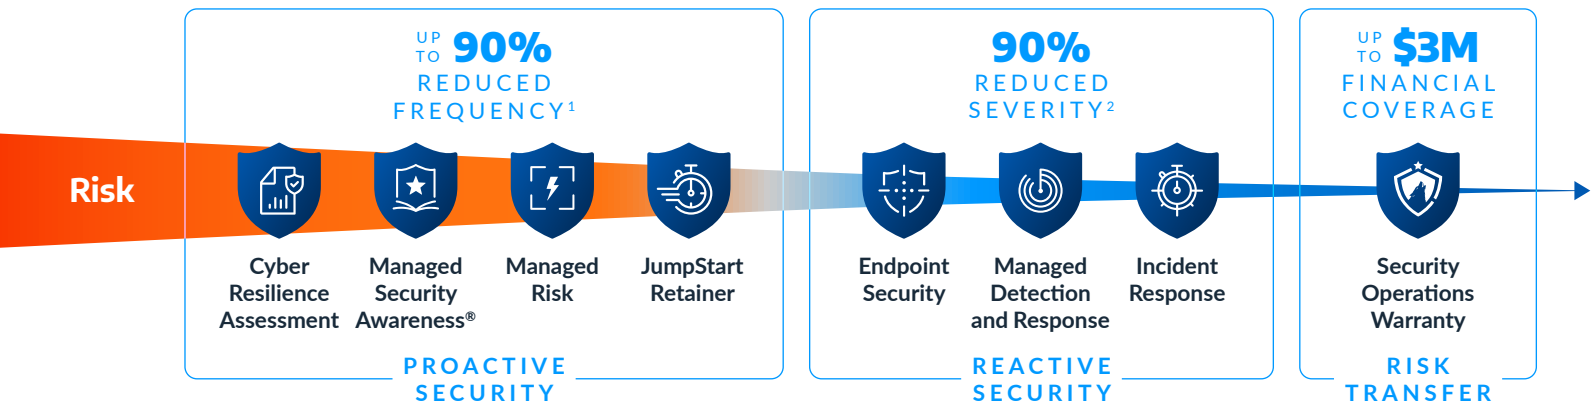

Best of all, the remaining risk can be financially transferred to Arctic Wolf through our industry-leading Security Operations Warranty. With up to \$3 million (USD) in financial coverage and the ability to fund your cyber insurance deductible, you can minimize your out-of-pocket expenses after a cyber attack.
